## 1. Executive Summary

### 1.1 Project Overview

The Travel Management System is a web-based platform designed to connect travelers with travel agencies in a unified digital environment. In traditional travel planning, users often rely on multiple websites or direct communication with agencies, which can be time-consuming, inconsistent, and difficult to manage.

This system addresses that problem by providing a centralized platform where travelers can explore, compare, and book travel packages in a single place. At the same time, travel agencies can publish and manage their offers, interact with customers, and monitor bookings more efficiently.

The platform supports key functionalities such as user registration, travel package browsing, reservation management, and feedback, enabling a structured interaction between users and agencies. By consolidating these processes into one system, the platform improves accessibility, reduces complexity in trip planning, and enhances overall communication between stakeholders.

### 1.2 Purpose and Scope of this Specification

This document defines the functional and non-functional requirements for the Eren Travel Agency Management System. Its purpose is to establish a clear understanding of the system's features, behavior, and limitations for all stakeholders involved in the project, including developers, designers, and project managers.

#### **In scope:**

The scope of this system includes the development of a web-based platform that enables interaction between travelers, travel agencies, and administrators. The system supports the following core functionalities:

- User registration, authentication, and profile management
- Browsing, searching, and filtering travel packages
- Booking and managing travel reservations
- Travel package creation and management by agencies
- Review and rating system for user feedback
- B2B client registration and access to specialized pricing
- Administrative tools for monitoring users, agencies, and platform activity

#### **Out of Scope:**

The following features are not included in the current version of the system:

- Direct integration with airline or hotel internal reservation systems (except via third-party APIs)
- Development of native mobile applications (Android/iOS) in this phase
- Implementation of custom payment gateways (external services will be used)
- Advanced AI-based recommendation or personalization systems (planned for future versions)

## 2. Product/Service Description

In this section, describe the general factors that affect the product and its requirements. This section should contain background information, not state specific requirements (provide the reasons why certain specific requirements are later specified).

### 2.1 Product Context

*The Travel Management System is a web-based application that functions as a centralized platform connecting multiple user roles, including travelers, travel agencies, business clients, and administrators. The system is designed to facilitate interaction between these actors by providing a unified environment for browsing, booking, and managing travel services.*

The system is not fully standalone, as it relies on several external services to support its core functionalities. These include:

- **Payment gateways** for processing online transactions
- **Email services** for sending booking confirmations, notifications, and updates
- **Cloud hosting services** for data storage and system availability
- **Authentication services** for secure login and user management

*The platform acts as an intermediary between travelers and travel agencies, allowing agencies to publish and manage travel packages while users can search, compare, and book them. By integrating internal system components with external services, the platform ensures efficient communication, reliable transaction processing, and continuous availability.*

### 2.2 User Characteristics

The system is designed to support multiple types of users, each with different roles, levels of experience, and interaction patterns. Understanding these user characteristics helps ensure that the system is designed to meet their needs effectively.

#### 1. Traveler (Client)

- Search for travel packages based on destination, price, or travel dates
- View detailed information about travel offers
- Book travel packages directly through the platform
- Track past and current reservations
- Follow travel agencies to receive updates and promotions
- Leave reviews and ratings for services

#### 2. Travel Agency

- Publish travel packages and promotional offers
- Update or remove travel listings
- Manage bookings made through the platform

### ***Eren Travel Agency Requirements Specification***

- View customer reviews and feedback
- Track the performance of their travel offers

#### **3. Platform Administrator**

- Manage users and travel agencies
- Monitor activity across the system
- Review reported issues or inappropriate content
- Generate reports about bookings and platform usage

#### **4. B2B Client (Business User)**

- Register using travel agency details and tax ID to access B2B features
- Get verified to use the platform as a business client
- Browse travel packages with special B2B pricing
- Book travel packages at business rate

### **2.3 Assumptions**

#### **User Assumptions**

- Users will have access to a stable and reliable internet connection when using the platform.
- Users are expected to have basic digital literacy and familiarity with web applications.
- Travel agencies are capable of managing and updating their own travel packages and content.
- Users and agencies will provide accurate and valid information when interacting with the system.

#### **Technical Assumptions**

- The system will be accessed through modern web browsers such as Chrome, Firefox, Edge, or Safari.
- External services (e.g., payment gateways, email systems) will be available and function reliably.
- The platform will operate in a web-based environment without requiring local installation.

#### **Operational Assumptions**

- The system will initially support a limited number of languages (e.g., English).
- The number of users and travel agencies will be manageable within the initial system capacity.

### **2.4 Constraints**

#### **1. Technical Constraints:**

- The system must be developed using a specific technology stack (e.g., web frameworks and relational databases).
- Hosting infrastructure may limit performance, storage, or scalability in early stages.

#### **2. Security Constraints:**

### ***Eren Travel Agency Requirements Specification***

- The system must implement secure authentication and data protection mechanisms.
- Sensitive data must be encrypted and protected from unauthorized access.

#### **3. Operational Constraints:**

- The system must maintain logs and audit trails for monitoring and troubleshooting.
- Continuous availability is required, with minimal downtime.

#### **4. Design Constraints:**

- The user interface must be responsive and compatible across multiple devices.
- The design should follow standard UI/UX principles for usability.

#### **5. Business Constraints:**

- Development must be completed within a limited timeframe and budget.
- Priority is given to core features over advanced functionality.

#### **2.5 Dependencies**

##### **External Dependencies**

- The system depends on **third-party payment gateways** for processing booking payments and financial transactions.
- It relies on **email services** to send notifications such as booking confirmations, updates, and account-related messages.
- The platform depends on **cloud infrastructure** for hosting, data storage, and system availability.
- Continuous **internet connectivity** is required for both users and system operations.

##### **System Dependencies**

- The **authentication module** must be implemented before enabling booking and other user-specific functionalities.
- Reservation and booking features depend on the availability of **travel package data** provided and maintained by travel agencies.

##### **Organizational Dependencies**

- The system depends on **travel agencies actively managing and updating their listings**, ensuring that available packages are accurate and up to d

3. Requirements

3.1 Dependencies

| Req#  | Requirement                                                                                                                                          | Comments                                                       | Priority | Date       | Reviewed/<br>Approved          |
|-------|------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------|----------|------------|--------------------------------|
| FR_01 | The system should allow a traveler to create an account using valid registration data such as name, email, and password to access platform services. | Invalid or incomplete data should not be accepted.             | 1        | 09/04/2026 | Ajmi Capo /<br>Uendi Velaj     |
| FR_2  | The system should allow users to securely log in and log out of the platform using their registered credentials.                                     | The system should not allow access with incorrect credentials. | 1        | 09/04/2026 | Renis Veliu /<br>Donald Ferati |
| FR_3  | The system should allow travelers to browse available travel packages displayed in a clear and organized manner.                                     | Only active and available packages should be shown.            | 1        | 09/04/2026 | Uendi Velaj /<br>Renis Veliu   |
| FR_4  | The system should allow travelers to search for travel packages using keywords such as destination, package name, or date.                           | The system should return relevant matching results.            | 1        | 09/04/2026 | Ergi Lika /<br>Idon Nurja      |
| FR_5  | The system should allow travelers to filter travel packages based on criteria such as price, date, and availability.                                 | Multiple filters can be applied simultaneously.                | 1        | 09/04/2026 | Idon Nurja /<br>Renis Veliu    |

**Eren Travel Agency Requirements Specification**

|       |                                                                                                                                    |                                                                     |   |            |                             |
|-------|------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|---|------------|-----------------------------|
| FR_6  | The system should allow travelers to view detailed information for a selected travel package including all key trip details.       | Details must include price, destination, duration, and description. | 1 | 09/04/2026 | Anxhela Todaj / Uendi Velaj |
| FR_7  | The system should allow travelers to view reviews and ratings of travel packages and agencies to support decision-making.          | The system should not display unapproved or invalid reviews.        | 2 | 09/04/2026 | Donald Ferati / Ajmi Capo   |
| FR_8  | The system should allow a logged-in traveler to book travel packages by selecting options such as date and number of participants. | The user must be logged in before booking.                          | 1 | 09/04/2026 | Ajmi Capo / Uendi Velaj     |
| FR_9  | The system should verify availability of selected packages before confirming a booking.                                            | The system should prevent overbooking.                              | 1 | 09/04/2026 | Renis Veliu / Donald Ferati |
| FR_10 | The system should generate and provide a booking confirmation with complete details after a successful reservation.                | Confirmation should include booking reference and details.          | 1 | 09/04/2026 | Uendi Velaj / Renis Veliu   |
| FR_11 | The system should allow travelers to view their current and past reservations within their account.                                | Reservations should be categorized by status.                       | 1 | 09/04/2026 | Ergi Lika / Idon Nurja      |
| FR_12 | The system should allow travelers to cancel a reservation before the defined deadline according to policy rules.                   | The system should not allow cancellation after the deadline.        | 1 | 09/04/2026 | Idon Nurja / Renis Veliu    |

**Eren Travel Agency Requirements Specification**

|       |                                                                                                |                                                                                        |   |            |                             |
|-------|------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|---|------------|-----------------------------|
| FR_13 | The system should allow travelers to follow travel agencies to receive updates and new offers. | The system should not duplicate follow actions for the same agency.                    | 3 | 09/04/2026 | Anxhela Todaj / Uendi Velaj |
| FR_14 | The system should allow travelers to leave reviews and ratings after completing a trip.        | Reviews should only be allowed for completed bookings.                                 | 2 | 09/04/2026 | Donald Ferati / Ajmi Capo   |
| FR_15 | The system should allow travel agencies to update existing travel packages.                    | The system should not save invalid or incomplete updates.                              | 1 | 09/04/2026 | Ajmi Capo / Uendi Velaj     |
| FR_16 | The system should allow travel agencies to remove travel packages from the platform.           | The system should confirm deletion before removing the package.                        | 1 | 09/04/2026 | Renis Veliu / Donald Ferati |
| FR_17 | The system should allow travel agencies to view bookings made by travelers.                    | Booking data should be displayed clearly and only to authorized agencies.              | 1 | 09/04/2026 | Uendi Velaj / Renis Veliu   |
| FR_18 | The system should allow travel agencies to confirm reservations.                               | The system should update reservation status and notify the traveler.                   | 1 | 09/04/2026 | Ergi Lika / Idon Nurja      |
| FR_19 | The system should allow travel agencies to view customer reviews and ratings.                  | The system should display only valid and available feedback.                           | 2 | 09/04/2026 | Idon Nurja / Renis Veliu    |
| FR_20 | The system should allow administrators to manage user accounts.                                | The system should ensure secure access and data integrity during updates or deletions. | 1 | 09/04/2026 | Anxhela Todaj / Uendi Velaj |
| FR_21 | The system should allow administrators to verify travel agencies.                              | The system should update agency status based on approval or rejection.                 | 1 | 09/04/2026 | Donald Ferati / Ajmi Capo   |

### ***Eren Travel Agency Requirements Specification***

|       |                                                                         |                                                                         |   |            |                             |
|-------|-------------------------------------------------------------------------|-------------------------------------------------------------------------|---|------------|-----------------------------|
| FR_22 | The system should allow administrators to monitor platform activity.    | The system should display real-time logs and performance data.          | 2 | 09/04/2026 | Ajmi Capo / Uendi Velaj     |
| FR_23 | The system should allow administrators to generate reports.             | Reports should be accurate and generated based on available data.       | 2 | 09/04/2026 | Renis Veliu / Donald Ferati |
| FR_24 | The system should allow users to create a business account.             | The system should validate email and tax number and prevent duplicates. | 1 | 09/04/2026 | Uendi Velaj / Renis Veliu   |
| FR_25 | The system should allow administrators to verify business accounts.     | The system should grant B2B access only after successful verification.  | 1 | 09/04/2026 | Ergi Lika / Idon Nurja      |
| FR_26 | The system should allow business clients to view B2B offers.            | Access should be restricted to verified business accounts only.         | 1 | 09/04/2026 | Idon Nurja / Renis Veliu    |
| FR_27 | The system should allow business clients to filter B2B travel packages. | The system should return only packages matching the selected criteria.  | 1 | 09/04/2026 | Anxhela Todaj / Uendi Velaj |

## **3.2 Non-Functional Requirements**

### **3.2.1 Product Requirements**

#### **3.2.1.1 User Interface Requirements**

The user interface of the Travel Management System should be web-based and accessible through modern browsers on both desktop and mobile devices. The interface should be responsive, consistent, and easy to navigate. Different users should have different interface views according to their roles in the system.

## ***Eren Travel Agency Requirements Specification***

The user interface can be divided into the following main interfaces:

### Traveler Interface

Which will contain:

- A header section containing the platform logo, user name, and navigation menu.
- A login and registration section where the traveler can enter credentials or create a new account.
- A travel package browsing section where the traveler can search packages by destination, price, or travel dates.
- A package details page where the traveler can view full information about a selected travel offer.
- A reservations section where the traveler can view current and past bookings.
- A feedback and review section where the traveler can leave ratings and comments.
- A follow option that allows the traveler to receive updates and promotions from travel agencies.
- A log out option that terminates the current session and redirects the user to the main page.
- Forms and actions should display validation, error, and confirmation messages when necessary.

### Travel Packages Interface

Which will contain:

- A header section containing the platform logo, agency name, and navigation menu.
- A login section where the agency can enter credentials to access the system.
- A package management section where the agency can publish, update, or remove travel packages.
- A bookings section where the agency can view reservations made by travelers.
- A reservation management option allowing the agency to confirm bookings.
- A reviews section where the agency can view customer feedback and ratings.
- A package performance section where the agency can track the activity or visibility of their offers
- A log out option that terminates the current session and redirects the user to the main page.
- The interface should display confirmation and error messages for actions such as adding, editing, or deleting packages.

### Platform Administrator Interface

Which will contain:

- A header section containing the platform logo, administrator name, and navigation menu.
- A login section where the administrator can securely access the system.

### ***Eren Travel Agency Requirements Specification***

- A user management section where the administrator can manage traveler, agency, and business accounts.
- An agency verification section where the administrator can approve or reject travel agencies.
- A monitoring dashboard where the administrator can observe system activity.
- A reports section where the administrator can generate reports related to bookings and platform usage.
- A moderation section where reported issues can be reviewed.
- A log out option that terminates the current session and redirects the user to the main page.
- The administrator interface should display structured tables, lists, and system status information for efficient monitoring.

### **B2B Client Interface**

Which will contain:

- A header section containing the platform logo, company name, and navigation menu.
- A login and registration section where the business client can enter credentials or register using company details and tax ID.
- A verification status section where the business client can track approval of their account.
- A travel offers section where the client can browse travel packages with special B2B pricing.
- A booking section where the business client can reserve travel packages at business rates.
- A log out option that terminates the current session and redirects the user to the main page.
- Error and confirmation messages displayed during registration, verification, and booking processes.

### **3.2.1.2 Usability**

#### **Learnability**

The Travel Management System should be designed to be easy to learn and use for all types of users, including travelers, travel agencies, administrators, and business clients.

The system should require minimal training and provide clear guidance for performing common tasks.

- The system should be intuitive, allowing new users to understand basic functionalities without prior training.
- The interface should use clear labels, buttons, and navigation structures to help identify available actions.
- User interactions should follow consistent patterns across all pages to reduce confusion and improve familiarity.
- The system should provide helpful messages and guidance for users.

### ***Eren Travel Agency Requirements Specification***

- In case of errors, the system should display clear and informative messages explaining what went wrong and how to correct it.
- Users should be able to learn how to perform basic tasks within a short period of time.
- This documentation can serve as a user guide to all the users of the website.

#### **3.2.1.3 Efficiency**

##### Performance Requirements

- The system shall allow travellers to search and view travel packages with response times of no more than 2–3 seconds under normal conditions.
- The platform shall support multiple user roles (travellers, travel agencies, B2B clients, and platform administrators) performing operations simultaneously without noticeable performance degradation.
- Booking, updating, or canceling travel reservations shall be processed in real time to ensure immediate confirmation and accurate availability.
- Travel agencies shall be able to upload or update travel packages and promotions quickly, and the changes shall become visible to users immediately after submission.
- Once users are familiar with the system interface, common operations such as searching trips, comparing offers, or managing bookings should be completed within a few minutes.

##### Space Requirements

- The system shall efficiently store and manage data related to user accounts, travel packages, bookings, promotions, and transaction history.
- The database shall be capable of supporting large volumes of travel offers and booking records without affecting system performance.
- The platform shall optimize storage usage by organizing data in structured databases and removing or archiving outdated travel offers and historical booking data when necessary.
- The system shall maintain sufficient storage capacity to support growth in the number of travellers, agencies, and B2B clients using the platform.

#### **3.2.1.4 Dependability**

##### Availability

The Travel Management System should be accessible to all users, regardless of their location, device, or basic usability needs. The system should ensure that users can access and use the platform efficiently without unnecessary barriers.

- The system should run on modern web browsers without requiring installation.
- The platform should work on desktop, tablet, and mobile devices.
- All users should access the system using their credentials(given they are provided to them).
- The system should be available at any time, provided there is internet access.
- The interface should use clear text, readable fonts, and proper contrast.
- Navigation should be simple and consistent across all pages.
- All forms should have clearly labeled input fields.
- The system should display clear error and confirmation messages.

## ***Eren Travel Agency Requirements Specification***

### Reliability

- The system should handle user actions (e.g., booking, publishing packages) without data loss.
- The system should maintain consistent data even in case of errors.
- The number of system failures should be minimal during normal operations

### Monitoring

- The system should log important events such as login attempts, bookings, and errors.
- Errors and failures should be recorded for troubleshooting.
- The system should provide basic monitoring of system activity and performance.

### Integrity

- The system should ensure that stored data is accurate and not corrupted.
- Unauthorized changes to data should be prevented.
- Data consistency should be maintained across all system operations.

### **3.2.1.5 Security**

The Travel Management System shall protect user data and prevent unauthorized access, modification, or misuse.

- The system shall require authentication (username/email and password) for all users.
- The system shall enforce authorization, ensuring users can only access features related to their role.
- Passwords shall be stored in encrypted form.
- The system shall use secure communication protocols (e.g., HTTPS).
- Sensitive data shall be protected from unauthorized access.
- The system shall log important actions such as login attempts and critical operations.
- The system shall prevent unauthorized access through basic security mechanisms (e.g., input validation, session management).

## **3.2.2 Organizational Requirements**

### **3.2.2.1 Environment Requirements**

- The system must be compatible with modern web browsers (Chrome, Firefox, Safari) to ensure accessibility for both individual travelers and business clients.
- The platform must support secure integration with external email servers to handle automated triggers for account confirmations and booking receipts.
- The deployment environment must utilize HTTPS to secure all data transmissions, protecting sensitive business credentials and traveler details.
- The infrastructure must be mobile-responsive, allowing travel agencies and users to manage packages and reservations from various hardware environments.

### **3.2.2.2 Operational Requirements**

### ***Eren Travel Agency Requirements Specification***

- A verification workflow must be strictly followed where an Admin reviews and approves business accounts before they are granted B2B access.
- The system must mandate the entry of a company tax number during business registration to comply with organizational auditing and B2B standards.
- Administrative actors must be provided with monitoring tools to track platform activity and generate reports on usage and booking trends.
- Role-based permissions must be enforced to ensure that travel agencies can only update or remove their own published packages.

#### **3.2.2.3 Development Requirements**

- All use case specifications must adhere to the standardized tabular template established in the project's documentation to maintain consistency.
- Implementation must follow the defined User Story roadmap (US\_01 through US\_27) to ensure all traveler and agency requirements are met.
- The development team must use encrypted formats for password storage to ensure security parity across all account modules.
- Version control (such as GitHub) should be used to manage all project documentation and code, ensuring a clear history of updates for each use case.
- The UI development must be guided by pre-approved Figma designs to ensure consistency between user stories and the final user interface.

### **3.2.3 External Requirements**

#### **3.2.3.1 Regularity Requirements**

- The system should comply with privacy policies and data protection standards.
- User data such as IP addresses may be collected for system monitoring but should not be linked to personal identity without consent.
- The system should ensure secure handling and storage of user data.

#### **3.2.3.2 Ethical Requirements**

- Users have to agree to provide personal information for system usage.
- The system should clearly inform users how their data will be used.
- Traveler personal data collected:
  - Full Name
  - Email
  - Phone Number
- Travel agency data collected:
  - Agency Name
  - Business ID (NIPT)
  - Email
  - Phone Number
  - Address

### ***Eren Travel Agency Requirements Specification***

- The system should not share user data with third parties without user consent.
- The system should ensure transparency in reviews and ratings (no fake reviews allowed).

#### **3.2.3.3 Legislative Requirements**

The system must comply with applicable laws and regulations:

- The system should comply with Albanian Law No. 9887 “On the Protection of Personal Data”.
- The system should follow GDPR principles for data protection and privacy.
- The system should ensure that personal data is accessed only by authorized users.

#### **Accounting Requirements**

- The system should maintain records of bookings and transactions.
- The system should log all financial operations for auditing purposes.
- The system should not allow modification of transaction history without authorization.

#### **Security Requirements**

To protect the system from unauthorized access, data loss, or misuse, the following measures will be implemented:

- Sensitive data such as passwords have to be encrypted using hashing algorithms.
- The system should log user activities to ensure traceability and accountability.
- The system should validate all user inputs to prevent malicious data injection and invalid data entry.
- The system should require confirmation for critical actions (e.g., booking cancellation) to prevent accidental operations.
- Users should only access their own data and reservations.
- The system should not allow direct access to the database without authorization.
- The system should protect against common security threats such as SQL injection and unauthorized access.

### **3.3 Domain Requirements**

The Travel Agency System allows customers to search, book, and manage travel services such as flights, hotels, and tour packages through an online platform. The system supports user registration, secure payments, booking management, notifications, and customer reviews.

Administrators can manage travel packages, monitor bookings, generate reports, and handle customer support requests. The platform should be secure, user-friendly, scalable, and accessible from both desktop and mobile devices.

## **4. User Scenarios/Use Cases**

## 4.1 Requirements Analysis

### 4.1.1 User Scenarios List

| Nr    | Name                         | Description                                                                         |
|-------|------------------------------|-------------------------------------------------------------------------------------|
| US_01 | Create account               | User (Traveler, Business client): Registers an account to access platform services. |
| US_02 | Log in                       | User (Traveler, Travel Agency, Admin, Business client): Logs into the platform.     |
| US_03 | Browse travel packages       | User (Traveler, Business client): Browses available travel packages.                |
| US_04 | Search travel packages       | User (Traveler, Business client): Searches packages by destination or date          |
| US_05 | Filter travel packages       | User (Traveler, Business client): Filters packages by price, date, or availability. |
| US_06 | View travel package details  | User (Traveler, Business client): Views detailed package information.               |
| US_07 | View reviews and ratings     | User (Traveler, Business client): Checks reviews and ratings.                       |
| US_08 | Book a trip                  | User (Traveler, Business client): Books a travel package.                           |
| US_09 | Receive booking confirmation | User (Traveler, Business client): System sends and user receives confirmation.      |
| US_10 | View reservations            | User (Traveler, Business client): Views current and past reservations.              |
| US_11 | Cancel reservation           | User (Traveler, Business client): Cancels a reservation.                            |
| US_12 | Follow travel agencies       | User (Traveler, Business client): Follows agencies for updates.                     |
| US_13 | Leave feedback               | User (Traveler, Business client): Leaves reviews after completing a trip.           |
| US_14 | Publish travel packages      | Travel agency publishes travel packages                                             |
| US_15 | Update travel packages       | Travel agency updates package details                                               |
| US_16 | Remove travel packages       | Travel agency removes outdated packages                                             |

### ***Eren Travel Agency Requirements Specification***

|       |                           |                                                                |
|-------|---------------------------|----------------------------------------------------------------|
| US_17 | View bookings             | Travel agency views bookings made by travelers                 |
| US_18 | Confirm reservations      | Travel agency confirms bookings                                |
| US_19 | View customer reviews     | Travel agency monitors customer feedback                       |
| US_20 | Manage user accounts      | Admin manages user accounts for security                       |
| US_21 | Verify travel agencies    | Admin verifies and manages agencies                            |
| US_22 | Monitor platform activity | Admin monitors system activity                                 |
| US_23 | Generate reports          | Admin generates reports on bookings and usage                  |
| US_24 | Create business account   | Business client: Registers using company details.              |
| US_25 | Verify business account   | System/Admin: Verifies business credentials and grants access. |
| US_26 | View B2B offers           | Business client: Views special discounted packages.            |
| US_27 | Filter B2B packages       | Business client: Filters packages by price and availability    |

#### ***4.1.2 User Scenarios Extended***

US\_01: Create account

1. User navigates to registration page
2. User enters personal details (name, email, password)
3. System validates input data
4. System checks if email already exists
5. System creates user account
6. System confirms successful registration

US\_02: Log in

1. User navigates to login page
2. User enters email and password
3. System validates credentials
4. System grants access to user dashboard
5. If credentials are invalid: system shows error message
6. User may request password reset

US\_03: Browse travel packages

1. User navigates to travel packages section
2. System retrieves available packages
3. System displays list of packages
4. User scrolls and explores options

US\_04: Search travel packages

1. User enters destination or date in search bar

### ***Eren Travel Agency Requirements Specification***

2. System processes search query
3. System retrieves matching packages
4. System displays search results

#### US\_05: Filter travel packages

1. User selects filter options (price, date, etc.)
2. System applies filters
3. System updates displayed packages
4. User reviews filtered results

#### US\_06: View travel package details

1. User selects a travel package
2. System retrieves package details
3. System displays full information (price, itinerary, etc.)
4. User reviews details

#### US\_07: View reviews and ratings

1. User navigates to reviews section
2. System retrieves reviews and ratings
3. System displays feedback from other users
4. User evaluates agency reliability

#### US\_08: Book a trip

1. User selects a travel package
2. User enters booking details (dates, number of travelers)
3. System checks availability
4. User confirms booking
5. System creates reservation
6. System generates booking record

#### US\_09: Receive booking confirmation

1. System generates confirmation message
2. System sends confirmation (email/system notification)
3. User receives confirmation

#### US\_10: View reservations

1. User navigates to reservations page
2. System retrieves user reservations
3. System displays current and past reservations

#### US\_11: Cancel reservation

1. User selects reservation to cancel
2. System checks cancellation policy
3. User confirms cancellation
4. System cancels reservation

### ***Eren Travel Agency Requirements Specification***

5. System updates reservation status

#### **US\_12: Follow travel agencies**

1. User navigates to agency profile
2. User clicks "Follow"
3. System saves follow preference
4. System sends updates about new offers

#### **US\_13: Leave feedback**

1. User navigates to feedback section
2. User selects completed trip
3. User enters review and rating
4. System stores feedback
5. System confirms submission

#### **US\_14: Publish travel packages (Agency)**

1. Agency logs into system
2. Agency enters package details
3. System validates data
4. System publishes package
5. Package becomes visible to users

#### **US\_15: Update travel packages**

1. Agency selects existing package
2. Agency edits details
3. System validates updates
4. System saves changes

#### **US\_16: Remove travel packages**

1. Agency selects package
2. Agency chooses delete/remove option
3. System removes package from listings

#### **US\_17: View bookings**

1. Agency navigates to bookings section
2. System retrieves booking data
3. System displays list of bookings

#### **US\_18: Confirm reservations**

1. Agency selects reservation
2. Agency confirms booking
3. System updates reservation status
4. System notifies traveler

#### **US\_19: View customer reviews**

1. Agency navigates to reviews section
2. System retrieves feedback

### ***Eren Travel Agency Requirements Specification***

3. System displays reviews and ratings

US\_20: Manage user accounts (Admin)

1. Admin logs into system
2. Admin views user accounts
3. Admin updates or removes accounts
4. System saves changes

US\_21: Verify travel agencies

1. Admin reviews agency application
2. Admin checks submitted documents
3. Admin approves or rejects agency
4. System updates agency status

US\_22: Monitor platform activity

1. Admin accesses monitoring dashboard
2. System displays system activity data
3. Admin reviews logs and performance

US\_23: Generate reports

1. Admin selects report type
2. System collects relevant data
3. System generates report
4. Admin views/downloads report

US\_24: Create business account

1. Business user navigates to registration page
2. User enters company details (tax number, etc.)
3. System validates data
4. System creates business account

US\_25: Verify business account

1. System reviews company information
2. Admin verifies business credentials
3. System grants B2B access

US\_26: View B2B offers

1. Business user logs in
2. User navigates to B2B offers section
3. System retrieves special offers
4. System displays discounted packages

US\_27: Filter B2B packages

1. User applies filters (price, availability)
2. System processes filters
3. System displays filtered results

#### 4.1.3 User Cases

##### UC\_01: Create account

| Field                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| UC Name                             | Create account                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## 5. Implementation Technology

The Eren Travel Agency Management System is a dynamic web-based application developed using both client-side and server-side technologies. Communication between the client and server is handled securely through the HTTPS protocol.

For the client side of the application, the following technologies were used:

- HTML5
- CSS3
- JavaScript
- Bootstrap
- React.js
- 

These technologies were used to create a responsive, interactive, and user-friendly interface for travelers, travel agencies, administrators, and business clients.

For the server side, ASP.NET Core 8 Web API was used to implement the backend architecture and business logic of the system.

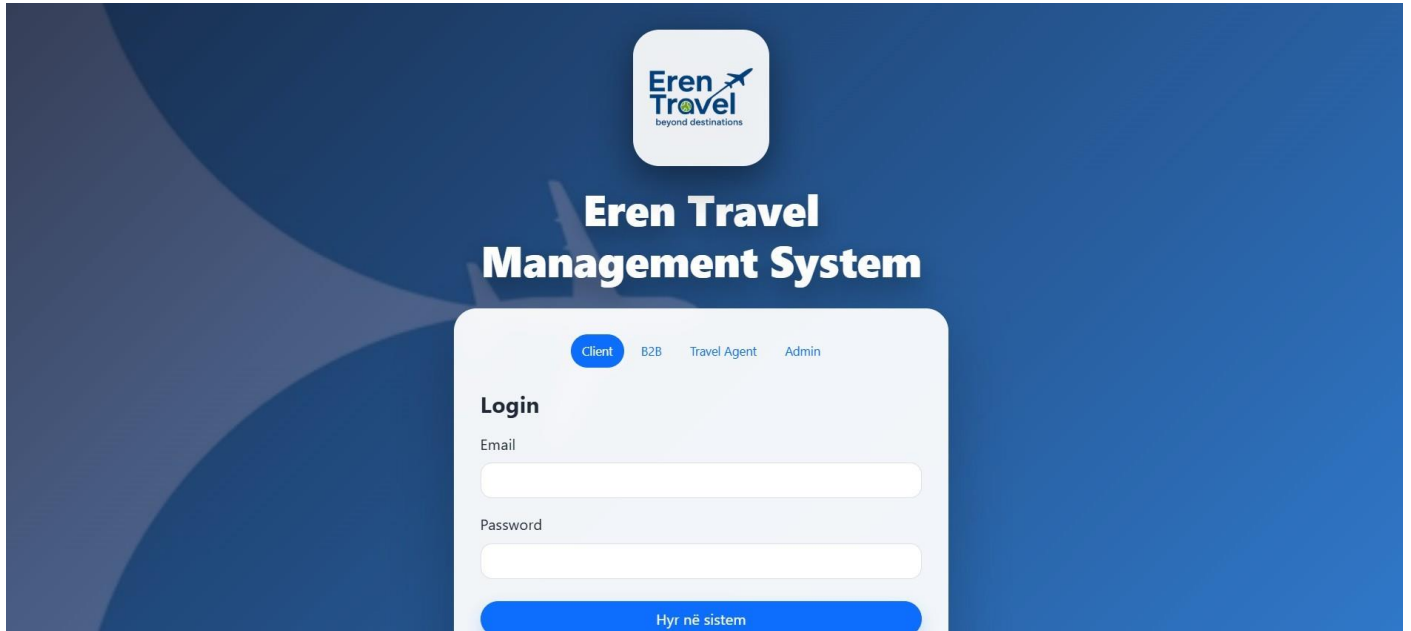

For the database layer, MySQL was used to store and manage application data, including user accounts, travel packages, reservations, reviews, and agency information. Database management and administration were performed using MySQL Workbench.

The project is also published on GitHub, where the development process and project resources can be accessed, including source code, diagrams, documentation, and reports. GitHub Links:

## 6. Appendix - Detailed Designs

### Login Page Based On Role

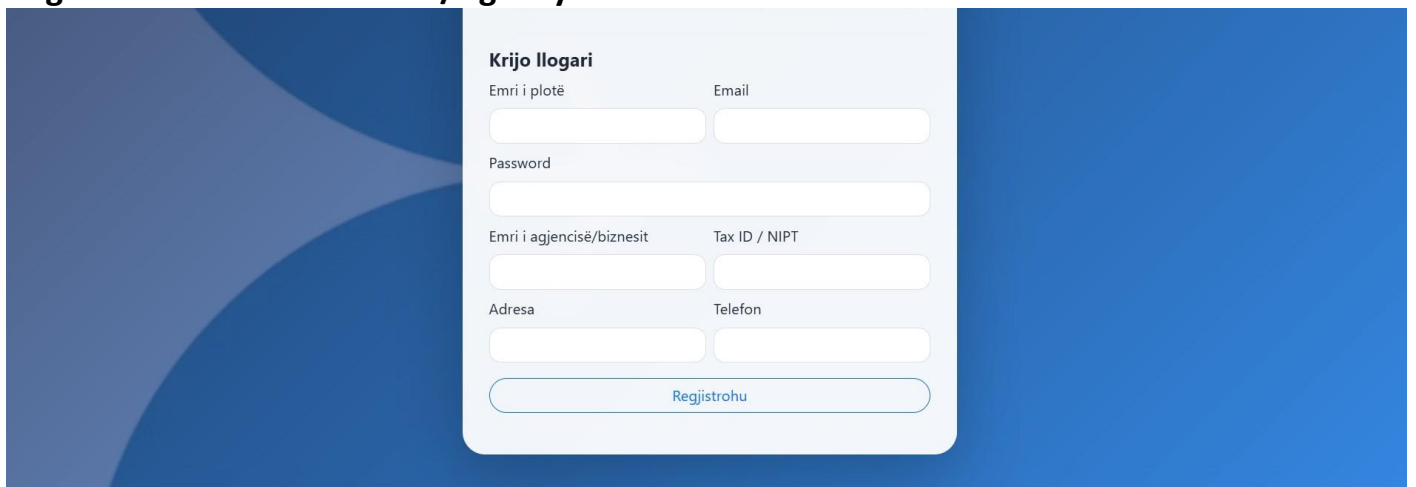

The login page features a dark blue background with a large, stylized white graphic of a person's head and shoulders. At the top center is the Eren Travel logo, which includes the text "Eren Travel" and "beyond destinations" with a small airplane icon. Below the logo, the title "Eren Travel Management System" is displayed in a large, bold, white font. The login form is a white card with rounded corners. It has a tabbed interface with four tabs: "Client" (selected), "B2B", "Travel Agent", and "Admin". The "Login" section contains two input fields for "Email" and "Password", followed by a blue button labeled "Hyr në sistem".

### Register Traveler Form

The register traveler form is a white card with rounded corners. It starts with a blue button labeled "Hyr në sistem". Below this is the "Krijohet llogari" section, which includes three input fields: "Emri i plotë" (Full Name), "Email", and "Password". A blue button labeled "Regjistrohu" is at the bottom of the form.

### Register Business 2 Business/Agency Form

The register business form is a white card with rounded corners. It starts with the "Krijohet llogari" section, which includes three input fields: "Emri i plotë" (Full Name), "Email", and "Password". Below this is the "Regjistrohu" section, which includes four input fields: "Emri i agjencisë/biznesit" (Business Name), "Tax ID / NIPT", "Adresa" (Address), and "Telefon" (Phone). A blue button labeled "Regjistrohu" is at the bottom of the form.

## Client Homepage- Travel Packages Site

The screenshot shows the Eren Travel Client Homepage. At the top, there's a navigation bar with the Eren Travel logo and links for 'Rezervimet e mia', 'Agjencitë që ndjek', 'Klient', and 'Dil'. Below the navigation bar, there's a dark blue header with the text 'Eren Travel Platform' and 'Paketat Turistike'. Underneath, a sub-header reads 'Kërko paketa, hap detajet e plota, ndiq agjencitë, lër review dhe rezervo direkt.' Below this, there's a search bar with filters: 'Kërko destinacion/agjenci/përshkrim', 'Çmimi min', 'Çmimi max', and 'Datë udhëtimi'. A 'Filtro' button is on the right. Below the search bar, there's a section titled 'Ofertat aktive' with a 'Rifresko' button. The main content area displays four travel packages: 'VENECIA, VEDROA, SAN MO DELIMITO', 'FIRENCE', 'HOTEL KOCIBELLI', and 'ALBEROBELLO'.

## Client Booking Travel Package

The screenshot shows the Eren Travel Client Booking Travel Package modal. The modal is titled 'Jordani' and features a large image of the Jordanian desert landscape. Below the image, there's a section for 'Reviews dhe ratings' showing a 0.00 rating from 0 clients. The modal also displays the package details: 'Jordani', 'Kohëzgjatja: 6 ditë • Nisja: Me kërkesë', and '1199.00€'. A 'Rezervo këtë paketë' section shows the price per person (1199.00€) and capacity (0/150 persons). The booking form includes fields for 'Emri', 'Email', 'Data e nisjes', 'Data e kthimit', 'Numri i personave', and 'Numri i dhomave'. A 'Totali' field shows 1199.00€ (1 persona x 1199.00€). At the bottom, there's a 'Mbyll' button and a 'Konfirmo rezervimin' button.
